My jobs need to run longer than the queues permit

- At INCD the **default** max elapsed time for the queues is 72h. The values for all queues can be consulted **here**
- In case you cannot parallelize your job (split one single job into multiple parallel jobs) you can use job dependencies. In this case you create a chain of jobs on which N+1 jobs dependes on the previous one N. Check this **link**

> **NOTE** There is a special queue available for very long jobs. This queue is restricted and available only in very special circunstances. If you have this type of requirement please contact the **INCD support helpdesk**
